**NEW**

### **EASY-GRAB FUSEBLOCK COVER SAVES ASSEMBLY AND SERVICE TIME**

Schurter's new easy-grab fuseblock cover, the OGN series, saves time during assembly as well as in test and service repair. The all-in-one fuseblock solution is available pre-loaded with 5x20mm fuse and fitted cover. It is available in tape and reel packaging for fully automated assembly.

The easy-grab cover 'grabs' hold of the fuse, removing it when the cover is lifted. It simplifies removal and replacement of the fuse, especially in tight spaces. It also improves safety, by eliminating direct contact with the fuse in circuit.

The thermoplastic material of the OGN socket is rated UL 94V-0. It withstands high soldering temperatures as per IEC 60068-2-20 test Tb method 1B. Mounting variations include surface mount with a footprint of 23x6 mm or through-hole with a pitch of 22.5 or 25mm.

The OGN fuseblock is approved to a maximum of 10A/ 250V under UL, CSA and VDE. Its rated power acceptance at ambient air temperature is up to 4W with or without the reflow cover, or 2.5W with the transparent cover.

Packing options are loose, or in 500 piece trays and 400 piece tape and reel for easy machine assembly. Lead-time is stock to 6 weeks. Lead-free version is available.
